Art Unit: 2757

1. The response filed April 12, 1999 has been entered and considered by the examiner.
2. The examiner agrees with the applicant's argument that the present application was filed to initiate an interference with a divisional application (it appears that the applicant did have access to the Serial number of the divisional application) of the parent application 07/866, 867. The divisional application which has the serial No. 08/747, 275 which is now US Pat. No. 5,754,864. In Conclusion, the present application is filed to initiate an interference with Pat. No. 5,754,864.
3. Claims 33-38 are presenting for examination.
4. The examiner would like to get the applicant's attention that page 88 is missing from the specification and that page should be provided by the applicant.
5. The following claim number 1 from U.S. Patent No. 5,754,864 is suggested to applicant under 35 U.S.C. 135(a) for the purposes of an interference:

A system for detecting pirated copies of a serialized software program, the system comprising:

a remote computer including a remote memory for storing a program, a remote revision level, and a program serial number;

a main computer including a main memory for storing the program serial number, the remote revision level corresponding to the program serial number, and a validation code for a remote program corresponding to the serial number, the validation code indicating whether the program stored in the remote memory is valid or invalid;

Art Unit: 2757

means for transmitting the remote revision level and the program serial number stored in the remote memory from the remote computer to the main computer;

means for comparing the remote program revision level received from the remote computer to the remote program revision level stored in the main memory corresponding to the program serial number received from the remote computer;

means for changing the validation code to indicate the serial number is invalid upon detection by the comparing means of a difference between the remote program revision level received from the remote computer and the remote program revision level stored in the memory of the main computer corresponding to the program serial number received from the remote computer;

means for detecting whether the program stored in the remote memory is valid or invalid based upon the validation code corresponding to the program serial number received from the remote computer; and

means for denying access to data stored in the memory of the main computer when the program corresponding to the serial number stored in the remote memory is invalid.

The suggested claim must be copied exactly, although other claims may be proposed under 37 CFR 1.605(a).

Applicant is given ONE MONTH or THIRTY DAYS, whichever is longer, from the mailing date of this communication to copy this patent claim. Failure to do so will be considered a concession that the subject matter of this claim is the prior invention of another under 35 U.S.C. 102(g), and

Art Unit: 2757

thus also prior art under 35 U.S.C. 103(a) (In re Oguie, 517 F.2d 1382, 186 USPQ 227 (CCPA 1975)), but will not result in the abandonment of this application. THE PROVISIONS OF 37 CFR 1.136 DO NOT APPLY TO THE TIME SPECIFIED IN THIS ACTION.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Moustafa M. Meky whose telephone number is (703) 305-9697. The examiner can normally be reached on week days from 7:30 am to 3:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenton Burgess, can be reached on (703) 305-4792. The fax phone number for this Group is (703) 308-9051.

Any response to this action should be mailed to:
